| Domain Information | <input type="text" value="query"/> |

Note: It may take up to 24 hours to synchronize the WHOIS Database with JP domain name registration.

Whois Search Types

Whois Search Keyword example

* Domain Information

By entering a JP domain name into the Keyword field, you can search information on the registered JP domain name.

EXAMPLE.CO.JP
EXAMPLE.JP

* Domain Information (Registrant's Name)

By entering a name of a registrant into the Keyword field, you can search information on the registered JP domain name. If the keyword hits multiple JP domain names, the list of information of all the matching JP domain names will be shown.

XXXCompany

* Host Information

By entering a host name into the Keyword field, you can search information on the host registered as the name server of a JP domain name.

ns.example.jp

* Host Information (IPv4, IPv6)

By entering an IP address into the Keyword field, you can search information on the host registered as the name server of a JP domain name.

192.168.0.1
2001:0000::0001

* Contact Information (previously called "JPNIC Contact Information")

By entering a JP Handle (previously called "JPNIC Contact Information") into the Keyword field, you can search information on the administrative or technical contact. (Due

ZZ0001JP
AB9999JP

to our construction under way, JP Handle is tentatively titled as "JPNIC Handle".)
